

1.A Beautiful interface will be created with UX Research in mind to give users the best possible User Interface Experience

2.The user will enter the marks and grades of their respective exams

3.The mark will be forwarded to the backend

4.The algorithm for this particular program will take the input and process it

BRAIN STORMING

5.The algorithm will fetch the predefined CSV file which contains the list of universities

6.Now this data will be processed by using Applied Data Science method

7.This ADS method will also train the data by using specified model for better predictions

8.Now the data that is fetched by this Algorithm is now transmitted from Backend to frontend User interface
